What the study *reported*

AMOUNT OF BLEEDING · 90 DAYS

As per the study report, 94.65% of women showed improvement in the amount of menstrual bleeding over 90 days.

56	90
WOMEN	DAYS

PUBLISHED CLINICAL STUDY

90-day clinical study

- Eur J Pharm Med Res 2022; 9(4)
- 64 women aged 15–45 with heavy menstrual bleeding; results for 56
- 2 capsules (500 mg) twice a day, before meals
- Prospective, non-comparative; IEC approved

IMPROVEMENT IN AMOUNT OF BLEEDING · BY GRADE

1 grade
improvement

2 grades
improvement

3 grades
improvement

Menstrual pain
of 40 with pain improved

87.5% of the 40 women who had menstrual pain at baseline improved by at least one grade ($p<0.0001$). Duration of bleeding also shifted to lower grades.

SAFETY

No adverse effects were observed in any participant, and physical examination showed no abnormalities during the study.

ABOUT THE EVIDENCE

Single-group study without a placebo, sponsored by Herbal Hills, using graded scores. Women with structural causes such as fibroids or polyps were excluded. Individual results vary.
